PESM: Complex and time consuming?

Partial Exemption Special Method (PESM) involves thousands of transactions, multiple data sources, spreadsheets and calculations. It's time intensive, costly and prone to error placing the business at risk of missing out on recoverable VAT, non-compliance and audit by HMRC.

Automating the process can:

- Reduce spreadsheet dependency and the inherent risk of errors
- Give you a trackable end-to-end process
- Put you in control, making it easier to implement changes
- Make the review process faster and more efficient

To find out how AlphaVAT, our MTD compliance platform, can automate your PESM process, contact us today.
